Full-stack engineer building production TypeScript products: a commercial clinic-management SaaS at Pabau, and an end-to-end rebuild of a multi-tenant recruiting platform that took its slowest filter from 15.2 s to 0.63 s on screen. I care about the data model, the tests and the operations as much as the interface, and I work with AI coding agents daily under rules that keep their output reviewable.

SELECTED WORK

ATS Flow — applicant tracking for trucking recruiters

April 2025 - present (rebuild since July 2026)

Sole engineer on the rebuild, Truckers Flow (freelance, alongside Pabau) · Next.js · GraphQL · Prisma · MariaDB

- Rebuilt a WordPress REST backend on unindexed key-value tables as a multi-tenant GraphQL platform. Measured on production with Playwright: the slowest filter went from 14.4 s to 93 ms on the server and from 15.2 s to 0.63 s on screen.
- Made tenant isolation structural: the tenant comes from the session, every write is scoped by company, access is default-deny, and a cross-tenant suite runs against a real database.
- Run it in production: phased deploys (backup, migrate, roll, smoke test) with rollback by tag, nightly encrypted on-server backups, SOPS-managed secrets, and disk and memory alerting added after a real full-disk incident.
- Around 4,000 automated tests and 32 architecture decision records since July 2026, built with AI coding agents working in parallel under a written protocol — isolated worktrees, a database per agent, verified landing.
- Earlier version (2025, with one other developer): the Next.js recruiter frontend on the legacy API. Our in-place backend migration stalled, which taught me to fix the data model first.

EXPERIENCE

Software Developer, Pabau Clinic Software

January 2024 - present (intern from October 2023)

Clinic-management SaaS · Next.js, React, TypeScript, GraphQL

Frontend Developer (freelance), Truckers Flow

February - October 2023

Next.js, TypeScript, Material UI

- Led the frontend of the recruiter web app: responsive layouts, mockups and prototypes, and the functional documentation.

Mechanical Engineer, Hidro-Konsult, Skopje

November 2019 - April 2022

- Hydraulic modelling, flood-risk feasibility studies and full tender documentation — the habit of writing down constraints before designing came from here.

SKILLS

Frontend	TypeScript, React 19, Next.js App Router, TanStack Query and Table, React Hook Form, Zod, Radix UI, CSS Modules, Material UI, Apollo Client, accessibility
Backend	Node.js, Bun, GraphQL (Pothos, Apollo), Prisma, MariaDB / MySQL, REST, better-auth
Quality and delivery	Bun test, Testing Library, Playwright, Docker, GitLab, Woodpecker CI, Traefik, Vercel, SOPS, restic
AI workflow	Claude Code, parallel agent workflows with isolated worktrees and verified landing

EDUCATION AND LANGUAGES

Front-End Development Academy, Brainster — 2022 - 2023

Bachelor of Engineering, Mechanical Engineering, Ss. Cyril and Methodius University, Skopje — 2014 - 2021

Macedonian (native), English (fluent, daily working language)
